

Controlled Nanosystems Final Symposium 2019

Konzil Konstanz, November 18–19, 2019

On December 31, 2019 the SFB 767 – Controlled Nanosystems: Interaction and Interfacing to the Macroscale is coming to an end after 12 successful years. In the Final Symposium **Controlled Nanosystems** we will celebrate this era of nanoscience at the University of Konstanz together with former researchers and friends of the SFB.

In this two-day event we will document the numerous scientific achievements and latest research highlights in a festive environment. Finally, we will illustrate how the collaborative program of the SFB 767 has paved the way for exciting exploration of new research directions in the future.
